

Reclaimed Insulating Oil

Electrical Oil Services Ltd (EOS) and its ancestor companies have been producing Reclaimed Insulating Oil to BS148 for more than 60 years. This provides the UK electricity supply industry, and large industrial energy users, with a sustainable alternative to resource depletion caused by the consumption of unused oil from refiners. In doing so many millions of litres of used insulating oil have been kept within the “recycling loop” and not lost to burning or other single use applications.

From early in 2016, in addition to the continued production of reclaimed oil to BS148:2009, EOS is proud to be able to offer an enhanced, “as new”, recycled oil product, fully meeting the performance requirements of the IEC unused oil Standard IEC 60296 2012; an uninhibited mineral insulating oil for use in power transformers and oil filled switchgear.

- ◆ **Enhanced recycled mineral insulating oil**
- ◆ **“As New” properties and performance**
- ◆ **The sustainable alternative to unused oil**
- ◆ **Uninhibited or inhibited options**
- ◆ **Price stable**
- ◆ **Secure supply**
